

THE EMPRESS EXPRESS

VOLUME XIII, No. 15

EMPRESS, ALTA. THURSDAY, Sept. 10, 1925

Price: \$2.00 Per Year

Mayfield United Church

Services this Sunday, at Trosley at 11 a.m. and at Mayfield at 3 p.m. Sunday School at 12 noon and 2 p.m. respectively.
F. Duxee,
Minister.

The "Ten Commandments" (For Young Husbands)

By City Magistrate J. H. Norris

1. Don't marry unless you want a family.
 2. Don't be dogmatic in your home.
 3. Love your wife as you love yourself.
 4. Strive to get your wife's point of view.
 5. Don't lie to your wife about finances.
 6. Remember that you married a human being, not an angel.
 7. Don't stray from your own bedstead too many nights of the week.
 8. Kiss and make up quarrels before going to sleep. Hangover fights lead to the divorce courts.
 9. Don't complain about your wife to some other woman.
 10. Be generous with praise. Celibate's Weekly.
- "The Ten Commandments" showing Empress Theatre in October.

Walter Yeaman, of Lemsford, was rushed to the hospital last week in a very grave condition from appendicitis.

Mary Pickford

It has been a long time since the movie fans of this district have had the pleasure of being entertained by this famous actress. She will please you as "Tess" the little poor girl in this very interesting photoplay.

Showing, Sat., September 19
Old favorite, HARRY CAREY, in

"SOFT SHOES"

A DETECTIVE STORY

Start 8 p.m., 25c and 50c

Save "Seed Corn," Now

Well matured, home grown seed corn, free from frost damage, is so much better than what we can get elsewhere that every effort should be made to save our own requirements. After the first of September, severe frosts may not be long delayed, so that steps should be taken at once to collect some seed.

Flint varieties like Gohu, Dakota, White Flint and Quebec 28 may be safely saved for seed when the grain has started to glaze, and the dent varieties will make seed, if well cured, after they have started to dent. They will, of course, make better seed if they are more mature, but if carefully handled even the comparatively soft corn will make safe seed. It is always advisable to gather a large amount of seed as soon as it is ready. If the season continues favorable and the bulk of the crop matures, the earliest gathered seed may not be required, but if a heavy frost should come unexpectedly a small percentage gathered early is a safeguard against being left without any seed for another year.

Select the seed from the standing crop. The best matured ears are easiest found, and ears can be chosen from stalks which are above and have the ears borne up well from the ground. As soon as gathered, not the next day, the ears should be husked and put either into a wire curing rack, or some position where they will cure quickly and thoroughly. For curing, a good circulation of air is essential, and an effort should be made to have the curing well advanced before severe frosts occur. For a small quantity of seed

Premier Announces General Elections

Richmond Hill, Ont., Sept. 5.—Parliament is dissolved. Addressing his constituents of North York here this afternoon, Premier King declared his intention to appeal to the polls. The date of the coming elections is understood to be Thursday, October 20.

Two cabinet changes were indicated by Premier King: 1—Hon. J. A. Robb, minister of immigration and acting minister of finance, becomes minister of finance in the stead of Right Hon. W. S. Fielding. 2—Hon. G. N. Gordon, deputy speaker of the house of commons, becomes minister of immigration in the stead of Mr. Robb.

The premier announced also Sir Henry Thornton's contract as president of the Can. Nat. railways had been renewed for a further period.

Numerous party conventions have already taken place. In the constituency, Dr. Gershaw, of Medicine Hat, secured the liberal nomination at a convention recently held in that city. Dr. Gershaw was the defeated candidate in the last federal election; H. A. Gardiner, prog., was the successful candidate.

Parcels up to 15 lbs. weight will now be accepted for transmission through the mails, it was announced by the Postmaster General. The maximum weight was formerly 10 lbs.

An upstairs room, in the house, with open windows for air circulation, is excellent. Even the kitchen may be pressed into service. See that there is a free circulation of air around each ear as they are liable to mould if they come in contact. When completely dry they may be bulked, but there is no place where they will keep so well until near seeding time as in a curing rack.

In a favorable corn year, enough seed should be selected for at least two seasons. It will keep perfectly if well stored, and there might be a shortage of good seed another year.

Keep the Corn Shows in mind and send some of your best product to find out how it compares with what others are growing. Plan to visit at least one show. There is no other way "just as good" to learn what constitutes good corn seed. The Alberta Show is to be held this year in Lethbridge on November 11th and 12th. The one for Saskatchewan will be held the following week at Indian Head.

—James Murray.

Empress Players at Abbey, Sask.

The Empress Players journeyed to Abbey, Sask., on Saturday last, where they presented "A Pair of Sixes." Unfortunately the elements were against them, the day being rainy and overcast, which had its influence on the attendance. However there was a very fair "house," and the presentation was apparently well enjoyed.

Has Narrow Escape from Death: Severely Injured

James Weldon, of Coronation, had a miraculous escape from accidental death last Friday morning at Buffalo, Alta. He was cranking his car, which must have been in gear—when the motor started, the car ran over him. Mr. Weldon received serious lacerations to the face and left foot, as well as broken ribs. He is now resting easily at the local hospital.

Rust in Wheat Bad in Some Parts

The "News," Weyburn, Sask., regarding rust damage: "Mr. E. A. Banbury, motored to Ewart, Man., last week, going east along the C.P.R. main line to Hargrave, Man., and then south to Ewart. Mr. Banbury noticed that the wheat east of Broadview was slightly rusted and from then on it got worse, and by the time he arrived at his destination there were thousands of acres not worth sowing, and some of the farmers were burning the grain in the field. Mr. Banbury has a farm at Ewart, off which was cut 300 acres of wheat, which he doubts will pay for the twine. We haven't heard of any damage by rust in this district. In past seasons the rust has appeared under favorable conditions as the season advanced, and on such occasions we first hear of it in the Dakotas, then in southern Saskatchewan, and it gradually works north. A fast ripening season with little moisture is not a creator of rust. We just beat the rust by a few miles. In fact some fields in the district are showing signs of rust but there are late wheat, and nearly all the wheat is in stocks. The many wishes and prayer for rain in July which were not answered will now be expressed in thanks for the rainfall."

Mrs. Constance Steel, of Buffalo, who was admitted to the hospital last week with an injured eye, is now progressing favorably.

Says Order for Equal Rates On Grain and Flour, Stands

Simultaneously with the order for equal rates on grain and flour moving west, was issued a copy of a resolution proposed by Assistant Chief Commissioner S. J. McLean assisted by Commissioners Boyce and Lawrence. The resolution declared that the matter of export grain rates via Pacific ports and other matters must of necessity be dealt with as part of the general rate investigation and under the judgment to be rendered in connection with that investigation.

By report in the Vancouver "Sun," Chief Commissioner McKeown said that the order proposed. The order was approved by the two commissioners sitting in the case, and the last that a majority of the board disagreed, had no effect upon the order. The three commissioners who supported the resolution were not present at the hearing of the application which took place in Vancouver, on November 5, 1924.

Large Grain Shipment To The Coast Expected

It is estimated that the Canadian rail will mean an average saving of about 3 1/2c. per bush, to the Alberta shipper, and will mean the neighborhood of a 100 million bushels more grain shipped via the Western route this year. The specific reductions on mileage basis will make the new rate 18 cents from Calgary and 20 cents from Edmonton to Vancouver; as compared with the old rate of 23c. from both points. The reduction from a point 800 miles distance will be 4 1/2 cents per 100 lbs. Tullid is 807 miles from Vancouver; taking 800 miles as an average haul, the reduction in cost will be 2 1/2 cents per bushel of wheat.

A Unique Train

Peterborough, Ont.—A unique train, the first of its kind in the world, has been tried out over the Can. Nat. railway line from Peterborough to Lakeside. The fuel cost was only two cents a mile as compared with 20 to 25 cents a mile fuel cost of a steam engine pulling the same load.

The train consisting of a car and a trailer, is driven by a gas cylinder 200 horse power oil fuel engine directly connected with an electric generator which furnishes the motive

11c. is Final Payment on 1924 Pool Wheat

Announcement was made last week that a final payment of 21c. on the 1924 crop will be made contract holders in the Wheat Pool. 44c. per bush, was held back for reserve and elevator purposes. This makes the total payment on No. 1 wheat \$1.06 exclusive of the 4 1/2c. cents.

The entire combination is an empire product, the coaches being built at Point St. Charles and the engines by a British company, at Rugby, England.

The car made an average speed of 50 miles an hour. Five miles were travelled on one gallon of oil.

Russia Has Evolved Wonderful New Wheat

A new type of wheat, known as Colum III, has been evolved by the Russian institute of applied botany. It is claimed that this new wheat is immensely superior to Canada's Marquis and regards productivity and quality, yielding double to treble the amount from the best varieties.—Ex.

M. G. BOYD

No Reduction of Navies Should Be Made Now Says British Admiral

Montreal.—This is certainly not the time to consider reduction of navies or naval armaments," was the answer given by Vice-Admiral Sir James A. Ferguson, commander-in-chief of the North American-West Indies squadron of the Royal Navy, upon his arrival here on board his flagship, H.M.S. Calcutta, to a group upon proposals for reduction in armaments.

Sir James has been away from England for over a year, but he has followed the developments in the Old Country in his absence with the greatest interest, he says.

It was futile to talk of cutting down naval armaments in the light of events, he said. But when he was asked to establish his views on Canadian proposals, he demurred, saying that it was not his desire to talk of the Dominion's "navy" or lack of a navy.

"I can say this, however, that our men are remarkably keen. One of your ships, the *Patriot*, has been with the squadron and the officers and men are excellent. They show remarkably fine spirit."

Wheat Board Surplus

Saskatchewan's Share To Be Paid At Once

Ottawa.—Confirmation of the arrangement for the immediate payment of Saskatchewan's share of the wheat board surplus was made here by Hon. J. A. Robb, acting minister of finance.

The sum to be paid to the province is approximately \$258,000, will be forwarded to the Saskatchewan Government in the course of the next two or three days; and represents, it is understood, the proportion of the surplus due to that province, of those who have sent wheat to the board for sale and distribution, at the time the Canadian wheat board gave up office in 1921.

Payments of the respective shares due to Alberta, Ontario and Quebec have already been made, it is stated.

Palmer Cabinet Doomed

Paris.—Premier Palmer's compromise cabinet was doomed when the Socialist Congress, representing 10 direct votes in the Chamber of Deputies, decided overwhelmingly against giving any support to the present cabinet.

The resolutions of Leon Blum and Paul Faure, declaring war on Palmer, were carried by 210 votes against 159 for a motion urging a benevolent attitude toward the present government.

Attempt On Life Of King Alfonso
Mendota, France.—An unverified account of another attempt on the life of King Alfonso, of Spain, was given by a returning traveler here. According to this account, a man, arrested at Santander, Saturday night, as he was in the act of drawing a large revolver in the presence of the King. A detective pinned his arms before he could get the weapon out of his pocket.

New Grain Inspector

Calgary.—George Hill, Dominion Government grain inspector in Calgary, has been offered and accepted the appointment of chairman of the grain appeal board authorized by the board of grain commissioners under the new Grain Act.

Mr. Hill will commence his new duties on September 1. He will be located in Calgary.

May Visit U. S.

Paris.—Finance Minister Caillaux announced at the Anglo-American Press luncheon here that he would in all probability go to the United States, and that if he does it will be "to settle the unhappy question of debts."

To Safeguard Public In Britain Against Unrest Fostered By Communists

London.—The Daily Mail says that the home secretary, Sir William Joynson-Hicks, has decided in favor of the rapid recruitment of special constabulary as one of the steps necessary to safeguard the public against the unrest fostered by Communists.

The Mail asserts that Sir William is anxious to take the necessary steps to safeguard the public against the unrest fostered by Communists. The Mail asserts that Sir William is anxious to take the necessary steps to safeguard the public against the unrest fostered by Communists.

Chinese Coastal Laws Have Created Crisis

May Be Declaration of War, Or Only Act of Force

London.—The new Chinese coastal regulations, discriminating against British and Japanese shipping as reported from Canton, are not only engaging the close attention of the British Government, but have raised a remarkable stir in the press.

The regulations formed by the Cantonese authorities are:

First.—Steamers of any nationality, domestic or foreign, will be allowed to use any port, provided they call calling at the British port of Hong Kong.

Second.—All steamers upon entering ports must be subject to inspection by pickets of the anti-imperialist Union. The British consul-general at Canton protested to the Chinese Government, that the regulations were in violation of Great Britain's treaty rights and were tantamount to a declaration of war. His stand is endorsed by many papers here, although it is recognized that the Chinese Government is probably powerless in the matter.

The general conclusion, accordingly, is that the regulations are a deliberate affront by the so-called Cantonese government, which lacks international status and is regarded here as an illegitimate puppet of the British.

The action, therefore, is held by some to be rather an act of piracy than of war. Nevertheless, the incident is looked upon as having created somewhat of a crisis.

The foreign office is examining the regulations with great care and is in constant touch with the Chinese Government, desiring to reach a complete agreement regarding any measure to be taken.

The Daily Mail's Hong Kong correspondent says there is great indignation among the British there, coupled with impatience at the apparent inaction of the British Government.

Explorers Ordered To Leave Mongolia

Government Alleges Leader's Expedition Has Violated Agreement

Urga, Mongolia.—The Mongolian Government has ordered the third Asiatic expedition of the American Museum of Natural History, under the leadership of Roy Andrews, to cease its explorations in scientific work and to leave Mongolian territory, alleging that Mr. Andrews has violated the terms of his agreement with Mongolian officials.

The Mongolian Government further alleges that besides carrying out his scientific work, the expedition has been engaged in geological, paleontological, geology and zoology. Mr. Andrews' expedition has also engaged in topographical work and has shipped a number of specimens in a military sense—persons.

Mr. Andrews also is accused of carrying on political propaganda and stirring up the Mongolians against the Red Bolsheviks.

Low Water In Lake Ontario

Rochester, N.Y.—Concern has been caused here by the fact that Lake Ontario is smaller and shallower than it has been in the last quarter century. Government experts here declare that the Chicago drainage canal, completed last year, which diverts water from Lake Michigan through the city of Chicago and into the Mississippi Valley, for sanitary purposes, is responsible.

To Safeguard Public In Britain Against Unrest Fostered By Communists

London.—The Daily Mail says that the home secretary, Sir William Joynson-Hicks, has decided in favor of the rapid recruitment of special constabulary as one of the steps necessary to safeguard the public against the unrest fostered by Communists.

The Mail asserts that Sir William is anxious to take the necessary steps to safeguard the public against the unrest fostered by Communists. The Mail asserts that Sir William is anxious to take the necessary steps to safeguard the public against the unrest fostered by Communists.

Worried Over Polish German Trade War

Danzig Business Men Do Not Profit By Exemptions

Danzig.—The trade war between Poland and Germany now in progress may have one beneficiary result in the opinion of many Danzig business men. It will mean the defection of Upper Silesian coal to the countries bordering upon the Baltic Sea which were formerly a part of the German Empire. Such a defection would, in their opinion, prove an advantage to four interested groups; the Poles would have a promising new market in exchange for the German; Danzig would gain much new business as the shipping port; the Baltic countries could obtain the coal more cheaply than they can now buy English coal; Germany could dispose of her Ruhr coal without the interference of Upper Silesian coal competition.

The people of Danzig are the innocent victims of the trade war. The rate war between Germany and Poland. Goods of purely Danzig origin may go to Germany unimpeded, and in Germany the Danzig articles intended purely for Danzig are permitted to come into the Free City unimpeded.

As a matter of fact there are practically no "goods of purely Danzig origin," consequently exempting that class of merchandise from the trade war. The Danzig business men.

Criticizes Canada's Navy

Sarcastic Article Appears in Weekly Paper in London

London.—A writer in *Truth*, the weekly paper which frequently comments upon the justice of Canada's contribution to the British navy, says: "As the Toronto globe recently was very much displeased with me for quoting the precise figures of the Dominion's contribution to the sea power of the empire, I think it might tell the Dominion's navy that the active Canadian navy has now put to sea to cruise in company with the Canadian navy, a specially constituted squadron. In other words, the destroyer *Patriot* has left her moorings at Esquimaux and will not return until the beginning of October."

"What the other half of the active Canadian navy is doing I have no means of knowing at present, but I believe she is assuring the safety of Halifax."

England Plans New Air Service

Passengers Would Be Landed At Airports

London.—A new development in air service between the continent and London is being planned for the near future. Experiments are being carried out with a view to the establishment of a regular service between London and Hamburg, via the Channel Islands. The experiments are being carried out with a view to the establishment of a regular service between London and Hamburg, via the Channel Islands.

To Check Rum Running

Conference Between Officials of Dominion and U. S. Government

Washington.—Canadian representatives to attend the conference decided to accept the terms of the trade in the coal industry on which the mine owners' notices for the termination of the 1924-25 wage scale were withdrawn, thus averting the recent threat of a strike. The conference instructed the executive of the labor union to take such steps as might be necessary to prevent the miners' case before the proposed government commission of inquiry.

Miners Accept Terms

London.—A conference of delegates of the Miners' Federation decided to accept the terms of the trade in the coal industry on which the mine owners' notices for the termination of the 1924-25 wage scale were withdrawn, thus averting the recent threat of a strike. The conference instructed the executive of the labor union to take such steps as might be necessary to prevent the miners' case before the proposed government commission of inquiry.

Will Tour Dominions

London.—Commander David C. Lamb, of the Salvation Army, in a few weeks will leave London on an eight months' tour of the Dominion of Newfoundland and South Africa. The object of the tour is to investigate the immigration possibilities of these two dominions.

Ready To Argue Claims

British Columbia Has Completed New Case to Freight Rates

Victoria, B.C.—British Columbia has completed preparation of its new freight rates case, based on recent parliamentary legislation. It has been announced by Premier John Oliver, after G. G. McCreer, government counsel, it will be telegraphed to the railway board, urging an immediate ruling or an immediate argument on this province's claims for lower western grain rates.

"We are ready now to argue our claims any time," Mr. Oliver stated. "On account of the rate legislation passed by parliament at its recent session, we will hold the railway board actually has no alternative but to give up the same rates on westbound grain as those prevailing on eastbound grain. We assert we are entitled to Crow's Nest rates and want them to apply on the movement of this year's crop."

Edmonton.—A saving of about five cents per bushel to Peace River farmers and shippers will be effected if the railway commission gives an order and in Crown's West Coast grain on grain allocated to the E. D. and B. C. and Central Canada Railways. It is understood that the whole debt has been reduced from gold to paper form.

Predicts War Between States and Japan

British Author Says Conflict Will Start March 3, 1931

London.—James T. Scott, an American on March 3, 1931, by completely blocking the Panama Canal, Japan will then capture the Philip islands and the American fleet in the Pacific. A mighty Japanese fleet launched from ships will proceed to the Pacific and destroy the American fleet in the Pacific.

After a tremendous loss of life and property, the American fleet will be wiped out by annihilating the Japanese grand fleet in mid-Pacific. In one of the greatest battles in naval history.

This prediction of conflict between America and Japan is made in a book, entitled "The Great Pacific War," by H. B. Swann, an architect and strategist. The book, just published here, is causing keen interest in military and naval circles.

Determining Sanity Of Scott

Case Appears to Be Puzzling Specialist

Chicago.—Russell T. Scott is described as an "indetermined case," a special subject to delusions of persecution, by Dr. Stubbledick, superintendent of the Chester Hospital for the criminal insane. "I don't know whether he is sane or insane," Dr. Stubbledick was quoted as saying. "He is a special subject to the Chicago 'Pit' bane from Chester, where the convicted murderer of a Chicago drug clerk recently was taken after a jury had decided that he had become insane. "It is too early to tell yet."

Cattle Shipments Hampered

Shortage of Steamers at Montreal Creates Awful Situation

Montreal.—Lack of ships for cattle shipments is hampering the transportation of cattle from Canada through the port of Montreal to Great Britain. The situation has become so serious that ships have been chartered in New York and Boston to carry cattle from Halifax and St. John, N.B., during summer months, but the cost is too prohibitive to allow these steamers provide all the way from American ports to Montreal for cattle.

Still At East Cape, Siberia

Nome, Alaska.—The steamer and sailing schooner *Maid*, which Capt. R. A. Anderson dispatched in 1922 to drift across the North Pole is still at the East Cape, Siberia, and is refusing from a Russian steamer. Wireless dispatches received here indicate. The Swenson Company's trading vessel, the *Sea Scout*, en route to Nome from East Cape, reported all was well aboard the *Maid*.

Chicago Editor Dead

Chicago.—Victor F. Lawson, editor of the *Chicago Tribune*, died here today. Mr. Lawson had suffered heart attacks in recent years from overwork, and an attack with acute dilation, proved fatal.

Visit Of Prince Of Wales To South America Held Of Universal Importance

Return Russian Warships

French Government Decides to Hand Ships Over to Soviets

Paris.—The French Government has decided to hand over the Russian warships now at Brest, to the Soviets. The Soviets, in an agreement drawn up by Ambassador Krasin and Deputy Vincent Danilev, the French delegate, recognize the Soviet debt of \$150,000,000 and give French capitalists a contract to reconstruct Russia in return for huge French credits.

The Soviets promise every one of the four million French Russian bondholders ten per cent. of his holdings in new Soviet bonds and thirty per cent. in bonds of new Franco-Russian companies, which will be formed to exploit mines, forests, factories and oil fields in Russia. However, it is understood that the whole debt has been reduced from gold to paper form.

The Russian fleet at Brest, formerly held by General Wrangel who was fighting the Soviet revolution, consists of two dreadnoughts, two battle cruisers, nine destroyers, four submarines, one schooner and some auxiliary vessels.

Leaves Cares Of Office

Officialdom of Britain Off on Autumn

London.—If a ritual power should open war on England tomorrow, the measures of defense would have to be organized by junior officials. The British Government has gone through a long process of reorganization, reorganizing, reorganizing and general hollowness.

King George and Queen Mary are visiting Princess Mary at Goldborough. Baldwin has left for his country seat, Haul, Yorkshire. Prime Minister Lloyd George is in Worcester. Winston Churchill has gone to Surrey, where he is painting pictures. Lord Curzon is shooting in Scotland. There are also Admiral Lord Beatty, Field Marshal Earl Haig and other chiefs of the fighting services. The home secretary, Sir William Johnson Hicks, is visiting the Communists a rest for a while while he shoots rabbits, and the war minister has gone to the seaside to recuperate.

Most of the chiefs of the permanent staff of the government offices are also taking holidays in the last half of August and most of September.

Geologists Have Narrow Escape

Alberta Professor and His Assistant Nearly Lose Lives

Edmonton.—Shipwrecked on the Bow River, near the mouth of the Bow River, a party of geologists and their assistants, who were on a geological survey along the river when their boat struck a boulder about 20 miles out of Rocky Mountain House and exploded. A number of the men were injured, beyond shaking up their nerves, but more than \$500 worth of notes, including instruments, maps and photographs, was lost.

Fire At French Exposition

Grenoble, France.—Aeroplane, automobiles, electric appliances and Lyons silk valued at more than ten million francs (approximately \$200,000) were completely destroyed by fire in the transporting and touring building of the nation's exposition. A bolt of lightning set fire to the building.

Is No Doubt Now Of A General Election Being Held This Fall

Ottawa.—Although officially nothing has been announced and may not be for a fortnight, there is no doubt now of a general election this fall. It will not come earlier and may be as late as November, it is coming.

All preparatory signs were in evidence following the cabinet council of the last week and the character of personal interviews. Organizers and members have been here and have left in a hurry, returning officers to their homes. Conventions have been held and there and other officers clearly indicate the course of view. In liberal circles a small minority of the cabinet and a large number of private members have sought another session, but it is not clear to the supporters of the cabinet here this process could possibly be of political benefit, whereas it might be fraught with danger. To all intents and purposes the campaign is now on in a preliminary way.

Buenos Aires

The newspapers of Buenos Aires comment enthusiastically in a complimentary vein on the visit of the Prince of Wales to the Argentine. It is necessary to remember, says La Nación, that the Prince, whose face is familiar through all the world and who everywhere is welcomed, one day will be monarch of the "greatest empire the centuries have known."

The newspaper continues: "His word later on will weigh in human destiny and the world which knows the innate goodness of his heart, tranquilly awaits the time when his counsel will perhaps guide the fortunes of several civilizations."

One of the surprising things about the Prince says La Nación is, the sober manner in which he answers the plaudits of the crowds. "This is not the salute in which we are accustomed. It is the intelligent, sympathetic attitude of an illustrious traveler who wishes to understand and know a people."

An afternoon paper, La Razón, says that thanks to the Prince's visit, Britain has turned upon the Argentine the searchlight of her curiosity. La Razón points out that Buenos Aires is to Buenos Aires what London is to London. It is the visit of a purely British and Argentine significance, but rather of universal importance.

Saskatchewan Lignite

Briquetting of Saskatchewan Lignite Technically Successful

Regina, Sask.—Carbonizing and briquetting of the Saskatchewan lignite, which have recently been carried out in Germany, have proven technically successful, says C. W. Worcester, professor of mechanical engineering at the University of Saskatchewan, who was in charge of the tests and reported to the government upon his return to the city.

The tests have been carried out during the past summer at two of the largest briquetting plants in Germany. These were Thyssen & Company, at Hülshorn-Buhr and the Lurgi Company, at Frankfurt. Fifty-two tons of lignite from the mines of the Western Dominion collieries at Tylerton were used in the tests.

Tourist Traffic Heavy

Over Two Hundred Cars Go Into Banff Daily

Edmonton.—Over a hundred and twenty motor cars a day have been going into Banff this summer. The provincial highways branch has a station at Banff, where the highway to the Rocky Mountain Park showing that from June 1 to August 7 the traffic was 1,200 cars. The highway to the park on the Calgary-Banff highway from 5,500 cars west-bound and 6,500 east-bound. This is an increase of 100 cars for sixty-nine days, and the average is still keeping up.

Is No Doubt Now Of A General Election Being Held This Fall

Ottawa.—Although officially nothing has been announced and may not be for a fortnight, there is no doubt now of a general election this fall. It will not come earlier and may be as late as November, it is coming.

All preparatory signs were in evidence following the cabinet council of the last week and the character of personal interviews. Organizers and members have been here and have left in a hurry, returning officers to their homes. Conventions have been held and there and other officers clearly indicate the course of view. In liberal circles a small minority of the cabinet and a large number of private members have sought another session, but it is not clear to the supporters of the cabinet here this process could possibly be of political benefit, whereas it might be fraught with danger. To all intents and purposes the campaign is now on in a preliminary way.

Another Century Will See Pacific Coast Importing All Of Its Lumber From Europe

One hundred years from now the people of the Pacific coast region of North America will be importing lumber from Europe. So stated a recent forestry expert from New York after an extensive journey through the timbered country of Oregon, Washington and British Columbia.

In view of the thousands of miles of stately standing timber on the Pacific coast today from California to Alaska, the forestry expert's words seem too ridiculous to even merit consideration. For here, upon a rugged coast-line, and reaching far into the interior, is such an abundance of tree growth, close-standing and mighty, as to seem inexhaustible. No other land of earth has been so heavily covered by nature with such species as the fir, hemlock, spruce and cedar, as the Pacific coast.

Yet, despite this far-reaching, still-standing array of timber, immensely tall and thick of bark, so vast and ever-increasing is the destruction caused by the logging industry that already there are a few far-sighted men nearly in agreement with the proponent of the foreign importer. "Abundance, luxury, decline, desolation!" Those words of Daniel Webster rise up to sound a warning to the too optimistic people of a new land.

A tree which took a thousand years to grow can be felled and cut up into service lengths in less than a year in the logging industry, when horses and oxen were used to draw out the felled timber, no horse was done to the surrounding stand. Today, when logging is coming more and more into use. By this system the enormous logs are lifted, by derrick, by cable, and steel cables one to two inches thick, and carried through the air. And the dangle, moving logs, many tons in weight, smash down the growth before them. Seedling and sapling are crushed to earth. Forty five years is the growing time for the fir and the spruce. When a modern lumbering outfit finish work, the ground is a desert. Trees that would produce lumber in another half-century are turned into wadding for the fire department. Fortunes in pole, tie and pulp timber have been wasted. Not a seed tree even is left.

With these things in mind, the prophecy that "The Pacific coast area will be importing lumber from Europe in a hundred years," seems less of a far-fetched statement.

How English Dry Wet Hay

Farmers Enthusiastic Over Process That Works Successfully

In England, where rain falls so frequently that it is no easy matter for the farmer to "make hay while the sun shines," they have found a plan that makes it possible to cut grass and stack it. In the midst of rainstorm without injury to the hay. Of course the wet grass cannot be dried in the sun, which is what most American farmers do with hay properly sun-dried. The English farmer puts up a frame made of stout poles connected by wire, and from the base of the frame he runs a pipe out to the drying machine. The newly mown hay is stacked up about the frame in a circular shape. He then attaches a lightly air starts his machine, which drives low air through the pipe to the bottom of the stack. The heated air rises through the grass, and in a day of eight hours to ten hours the tops of hay can be thoroughly dried. Enthusiasts over this contrivance say that hay thus dried retains more of its nutritive value than sun-dried hay. The drying machine can be driven by any gasoline engine; that of a farm tractor will serve. The machine operates a fan that drives into the pipe air that has been heated by passing over cylinders that are kept hot by kerosene burners.

Guba Has Many Newspapers There are 311 newspapers in Cuba, or 121 to each million inhabitants, data listed by the national statistics bureau revealed. Havana province, in which the capital is situated, has with 289. News publications in the other five provinces are as follows: Pinar del Rio, 25; Matanzas, 25; Ciego de Avila, 21; Camaguey, 20; and Oriente, 61.

Calgary's Population

Calgary's population in 1925, estimated by the Henderson's directory, following a census survey of the city, has been placed at 72,600, according to the 1925 issue which has just been published. Last year this same authority estimated the population at 70,732, showing an increase of approximately 1,868.

Nov. 19, 1925

Advise Canada To Get Boy Immigrants

200,000 Desirable Settlers Leave British Schools Every Year, It Is Said

Good Smith In a recent interview, Colonel J. Obed Smith, former Canadian government official in London, stressed the importance of British boy immigration. "This," he said, "is the only way that has been realized by Australia but not appreciated in Canada. In fact," said he, "Canada has lagged behind in this." "Not less than 200,000 boys leave British schools every year, crowding the London market. These should form a new immigration field each year from which Canada could draw very many desirable settlers. Australia has proved the value of the young British generation to the world, but Canada has not done so. People looking in public if Canada really wants immigrants, especially when the Empire Settlement Act of the Imperial Parliament provides financial assistance, should be looking for a way to limit within the possibilities of use. No one can complain that the British people are not willing to assist their own to settle in Canada." Col. Smith emphasized the fact that, if the scheme was to prove successful, the boys would be sent to Canada with good farmers, receive fair wages and the government would have to see that a portion of such wage was placed in the provincial savings bank, so that by the time the boy reached maturity he should have sufficient money to make a start on a farm of his own.

Big Game Being Massacred

Police Force Unable To Prevent Carnage In Transvaal

Sportsmen returning from the northern part of the Transvaal speak of the reckless slaughter of big game by hunters who seek supplies of bling (sun dried meat). This wasteful slaughter followed a recent proclamation forbidding the shooting of the Wildbeest or Gnu, a South African antelope has a buffalo-like head, an ass-like mane and horse-like tail. Apparently all sorts of big game are being turned into bling and the wagers return from the hunting grounds with full loads of game. The open country is described as unsafe. Ours are being fired all day long, and there are casualties in consequence. Meanwhile game is being absolutely massacred. Many animals are severely wounded and are left to die in agony. The police force is not large enough to prevent the carnage.

Business Is Improving

Employment at the beginning of July showed a further increase in Canada of 23 per cent. This gain caused the index number to stand at 94.5 as compared with 94.5 in June last, and with 94.9 in July, 1924. With this exception of lagging, in most of the seasonal activities, and trade, which showed no general change, all industries registered increased activity for the month, according to the Dominion bureau of statistics.

Unwell Monument

A monument to the four hundred British soldiers and soldiers drowned when the British transport "Transvaal" was torpedoed and sunk by the Germans in the Mediterranean Sea by Japan, 1917, was unveiled Aug. 17 at Sportsmen.

It is the want of health that makes wealth for the physician.

It is understood that premises have already been selected, and the personnel is on the way to take charge. The pool carries its own cargo space and will have to maintain a fairly large staff to handle the various details of its activities in this port.

Buffalo Remain In New Reserve

Plat details that the buffalo remain from Watlaught to the wood Bison reserve at La Bette, on the Slave River, are breaking away to the south back to the head of Watlaught, or that they are ever likely to be used by D. H. Christie, of the North West Territories and Yukon branch of the department of the interior, who supervised the whole movement of the 1,364 plains animals to northern regions recently.

Boys Old Bible

One of the first Bibles that came off the press of Adolph Guttenberg, by way of movable type, has been sold in Vienna, Austria, to an English purchaser for what is reported to have been a large sum. The Bible is the so-called 42-line Bible of the Melk Cistercian in Lower Austria. The name of the buyer has not been disclosed.

"Can you support my daughter in the style to which she is accustomed?" "No, but I can creation her to the style in which I can support her."

Livestock Trade In Six Months

Shows Decrease of Thousand Head In Canadian Sales

The Dominion Livestock branch market review shows that during the first six months of 1925 compared with the same period of 1924 there was a decrease in all Canada of a thousand head in the sales of cattle. Toronto showed an increase but the other markets had a decrease. Hogs increased by 85,000 compared with last year. Toronto alone showing a decrease. Increased offerings were particularly noticeable in the west. Sheep supplies declined, the markets generally showing a falling off.

A feature of the export trade was the increased shipments of cattle to Britain, they being the largest in June for any month since the embargo was removed in 1923. Exports of calves, hogs and sheep also showed an increase compared with 1924. The trade in live hogs between Western Canada and the Pacific coast continued good. Grain prices had more than doubled her purchase of beef, but the United States has fallen away 50 per cent. The production of eggs and milk, Dr. Shutt points out, make large demands on the phosphate of lime content of the ration. Feed and stock must supply the necessary lime compounds. Hard water, no doubt, is one of the principal sources. Among the longer lived legumes are particularly rich in lime, alfalfa heading the list, the feeding of which or other leguminous hay fosters practically obviates the necessity of supplementing the ration with special mineral-containing feeds. Meat and bone meal, blood meal, tankage and certain oil packing-house by-products are rich in desirable mineral constituents. In summer the probability is that the alfalfa will be especially in clover, will provide themselves with a sufficiency of calcium, but in winter the feed consisting of a large portion of the milling by-products of wheat, oats, corn, etc., may require supplementing with calcium rich feeds, such as less good clover or alfalfa hay can be liberally fed.

What Is A Good Veal Calf?

Points To Be Considered Before Offered For Market

This question being put to the author of "Raising Calves" in the published by the department of agriculture at Ottawa, the answer was, "It must be between the ages of four and eight weeks and 85 well fattened." A good veal calf weighs from 100 to 150 lb., a prime specimen ranging from 120 to 140 lb. A well fattened veal calf dresses from 65 to 70 per cent with the skin on. Its head should be comparatively small as compared with the body and its legs in appearance. The neck or "acra" should be thick, brisket full, ribs well covered, loin wide, flanks full, point of rump plump and meaty, thighs plump and scrotum or udder full. A good veal calf should have a generally firm touch all along the back and a sleek mellow skin that will lift easily from the body. A calf with such points is ready for the market, will command a good price, and is sure to give a good carcass of veal.

Owe Success To Rain

Cotton Industry In English Cities Depends On Moisture

When speaks of weather-making place rich and populous, one's first thought is naturally of health and pleasure resorts where blue skies and sunshine are usual and rain scarce. But there are many places that owe their success to bad weather. Manchester and its neighboring cities have a damp atmosphere that is particularly adapted to the spinning of cotton, and these places would be in a lot of the rainfall were suddenly halved. For similar climatic reasons Belfast has become the world center of the linen trade. Belfast has 231 rainy days out of the 365, and this suits both the growth of fax and its manufacture.

Women are naturally foolish because they were made to match the men.

Europe now has 13 sovereigns and 10 presidents.

Saskatchewan's production of creamery butter in July jumped another 21.9 per cent, or \$3.50 per pound, when the production for the month was 2,525,251 pounds, against 2,258,760 pounds in the corresponding month a year ago.

Production for the first seven months of this year total 9,306,232 pounds, as compared with 7,255,229 pounds in the same period last year, or an increase of 1,909,743 pounds, 26.5 per cent. The country's output from this province is still making the proportionately greater increase in production month by month.

Heriberto Doing Well

That the young Hibernians in their district are doing well is the statement of Rev. Father John J. Millan, one of the active workers in the Immigration scheme which has sent several hundred Irish boys to the north of Scotland. They have been asked to enter the labor market as soon as they are 16 years of age, and are returning to Ireland in the summer. The father continues working, he must support mother until she gets another job. Each has a right to work, but the mother is making or has in the bank.

A Fifty-Fifty Basis

In St. Louis and in Detroit, when both the father and mother are working, they must split even on payments for the children. And if the father has his job and the mother continues working, she must support mother until she gets another job. Each has a right to work, but the mother is making or has in the bank.

Pioneers Continue To Come From Many Nations To Take Up Homesteads On Prairies

Line In Feed

Feed and Drink Must Supply the Necessary Lime Compounds

One of the most important of the mineral constituents which enter into the tissue of the animal body is lime (calcium), says Dr. Short, Dominion chemist. Small traces of calcium compounds occur in muscle and the blood, bones and teeth are essentially phosphate and carbonate of lime. Cow need it in their pregnant state to order to supply their own needs and to build a strong skeletal structure in the developing calf. Special attention should be given to the phosphate of lime supply for ewes because of the latter a year, their rapid growth and the general nature of their feed which too frequently is poor in lime compounds. The production of eggs and milk, Dr. Short points out, make large demands on the phosphate of lime content of the ration. Feed and stock must supply the necessary lime compounds. Hard water, no doubt, is one of the principal sources. Among the longer lived legumes are particularly rich in lime, alfalfa heading the list, the feeding of which or other leguminous hay fosters practically obviates the necessity of supplementing the ration with special mineral-containing feeds. Meat and bone meal, blood meal, tankage and certain oil packing-house by-products are rich in desirable mineral constituents. In summer the probability is that the alfalfa will be especially in clover, will provide themselves with a sufficiency of calcium, but in winter the feed consisting of a large portion of the milling by-products of wheat, oats, corn, etc., may require supplementing with calcium rich feeds, such as less good clover or alfalfa hay can be liberally fed.

Canada May Have New Ocean Port

Glacier Bay Likely to Provide Outlet For Yukon Area

The Vancouver Star publishes the following from Stewart, B.C.: "Canada may have a new ocean port, the location of which is being considered by the Yukon Territory and the present necessity of crossing United States territory from Skagway, Alaska, to Seattle, B.C., is being considered by the P. F. Ford, Dominion Government engineer, who passed through on his way to Glacier Bay, an inlet west of Lynn Canal. "When the boundary between Alaska and Canada was delimited, it ran east and west several miles north of the head of open water in Glacier Bay, but a line of solid ice or glacier covered the water with the ice bar. Changing climate, unusually warm weather or some unnatural upheaval of the ice bed has caused the ice to melt, and the water is now open. With the result that the open waters of Glacier Bay now extend past the boundary line into Canadian territory. An outlet is feasible, provided a route can be found to connect with the Yukon River or other streams of the interior."

Saskatchewan Butter Production

Increases 27.9 Per Cent, Or \$3.50 Per Pound In July

Saskatchewan's production of creamery butter in July jumped another 21.9 per cent, or \$3.50 per pound, when the production for the month was 2,525,251 pounds, against 2,258,760 pounds in the corresponding month a year ago.

Production for the first seven months of this year total 9,306,232 pounds, as compared with 7,255,229 pounds in the same period last year, or an increase of 1,909,743 pounds, 26.5 per cent. The country's output from this province is still making the proportionately greater increase in production month by month.

Proceeding to the Cassini Country

Proceeding to the Cassini country of British Columbia for the purpose of getting special specimens of the Osborn caribou for the American Museum of Natural History, New York, Mr. C. C. Clark, of the American Museum, has made several trips procuring specimens for that institution.

Sounds That Travel Far

An experimenter in a balloon reports hearing a man's shout at 1,600 feet, a gun's roar at 2,000 feet, a train at 3,000 feet, the roll of drums and music of an orchestra at 4,000 feet; church bells tolling at 5,000 feet; a locomotive whistle at 6,000 feet; and the whistle of a locomotive at 10,000 feet.

'T-W-B' To Be Very Rare

"T-W-B" years from now tuberculous will be as uncommon as leprosy, says Dr. C. C. Clark, of the London Dispensary.

An Interesting Experiment

Experimental Farm at Agass, B.C., Is Raising Queen Bees

An exceptionally interesting experiment is being conducted for sale under the auspices of B.C. Dominion Experimental Farm. A start was made last year in the rearing of queen bees for domestic use. The colony selected for the purpose was the highest producer on the farm, it having yielded 210% of honey in one season. In his report for 1921 the superintendent, Mr. W. H. Jinks, describing the method adopted, says queen cells were obtained by plucking off the brood and young bees from the brood chamber and leaving the queen in the lower chamber, which was filled with empty combs. A wire screen was placed between the parent hive and the super containing the brood, with an entrance made at the rear. Two days later a number of cells were found and on the fifth day the queen cells were grafted to frames. These frames were placed in the queen colony. From the right colonies treated in this manner six queens emerged, two failed to mate, while the remaining four were large and developed well with pure drones, as the young bees produced were golden and uniform.

Sale Should Be Stopped

Revolvers, Whether Cheap or Expensive, Are Deadly Weapons

"Six factories in one town in Spain are devoted to the manufacture of cheap revolvers, and 20,000 of these numerous weapons are exported to the United States each year on the orders of consular agents. I have disposed of them to any person who may seek to buy. It has been proven that many of the murders committed in Chicago are due to the use of the Spanish-made revolvers. The tariff commission will report to the president that the importation of cheap revolvers be stopped."—*Day City, Mich., Times-Tribune.*

"Penny wise, pound foolish," says the Ottawa Journal. "If there is any room argument for stopping the importation of cheap revolvers, the same argument is good for stopping the importation of all revolvers. If revolvers are an evil thing, are they any less evil when they are of the most efficient and deadly kind, as expensive revolvers are?"

"And if good argument exists against importation of revolvers because they are evil, does not the same argument apply against automobile manufacture?"

"Why permit revolvers, at all? Even automobiles are not supposed to shoot first."

A Higher Critic

Colored Preacher Objected to Having Sermon Spilled

The "money trail" at Dayton, Tennessee, being to make a sermon preached by a colored gentleman on the subject of origins. "God made black man out of some dark mud what he took in mumbled into the form of man, and den set 'im up agin de pailin' to de try. Den He took some white mud, He mumbled into de form of man, and den set 'im up agin de pailin' to de try. Den He made den pailin'." "But who made den pailin'?" asked a critical listener. "You sit down, brother," thundered the preacher. "Such questions as you all am askin' would be nat'urly nater any system of theology."—*London Morning Post.*

Cleaver Work Of Sicilians

One of the most unique exhibits ever displayed in Canada, and one which attracted attention from one end of the Dominion to the other, is the display of the miniature Holy Land which has been shown in Edmonton. This miniature of the Holy Land was manufactured by Gustav Bruckner, an Italian, who has been working for more than eleven years on the exhibit. The exhibit includes sixty miniature places and has 900 moving figures. Biblical scenes in miniature are reproduced in miniature. The exhibit is to be shown throughout Canada and the United States.

Decides When Eggs Are Fresh

When an egg feels a French day's deliberation, which shows how serious the question is, a French court has decided that an egg is fresh when it is not more than two weeks' old in summer or more than three weeks' old in winter. Hereafter eggs in France will bear in red ink the date when they were laid.

Chinese history dates back to 2687 B.C., when the people were ruled by a sovereign.

Printing and gunpowder were invented in China, and the first newspaper in the world was printed in Peking.

Estates Of British Nobility Disappearing

Lands of Late Lord Leverhulme Now In Market

Day by day the vast landed estates of the British nobility keep coming into the market for sale under the auctioneer's hammer. Latest of those announced for forthcoming sales is the great sporting estate of the late Lord Leverhulme, comprising more than 300,000 acres. It is to be broken up and sold in portions by auction under a lawyer in the meantime is found for the whole estate.

It includes, besides large Scottish moorland holdings, Harris Island, which is eighteen miles wide by twenty-one long, and several smaller islands. In the properties are included one 4,000-acre deer hunting and sporting tract, and another of 25,000 acres, with excellent facilities for salmon fishing, so the auctioneer announces.

Another well-known Scottish sporting property that has just come into the market is Colinton, an estate of about 30,000 acres famous for its all-round shooting. The deer forest and moor of Colinton are capable of yielding 100 stags and 5,000 brace of grouse respectively, says the auctioneer. "The salmon, trout, and game is late and there is capital trout fishing."

Oldest Pen In Existence

Made of Bone and Very Simple In Construction

Of course we know that thousands of years ago the ancient used to write on stone tablets. And if we were at all interested in this sort of thing, we know that they used an instrument called a stylus instead of a pen. The stylus was made of iron, bone or some hard substance that could be given a good sharp point. The tablets on which one wished to write were first coated with a thin layer of wax, and they wrote with the pointed end. The stylus was blunt, smooth and somewhat expanded so any mistake could be smoothed out in the wax.

Students know all this, but they really didn't know just exactly what this stylus looked like. They had tried to reconstruct one from the knowledge that they had, but they were not sure of course. And now one of these old pens has been discovered at Kish and is the oldest pen in existence, being not less than four thousand years old. It is made of bone and is very simple in construction. It is six inches long with a triangular cross section and tapered ends.

Gathering News In Japan Is Difficult

Slow Wire Service Overcome By Using Carrier Pigeons

While there are 11 daily newspapers in Tokyo, and hundreds of others throughout the empire, the gathering of news in Japan is somewhat more difficult than it is in other countries. The reason is that the telephone and telegraph services are exceedingly primitive and almost worthless for the rapid transmission of news.

The tardy wire service, however, is overcome by the use of carrier pigeons. Every news agency and large newspaper has its own specially trained birds which are sent by train to the various correspondents. The pigeons, when released with the thinnest of "copy" sheets attached to them, make rapid time back to the editorial rooms.

Have Right of Way

The appearance of a large automobile with a powerful blue light on the front of the canopy over the driver's seat has puzzled many during their jaunts to the West End of London. It is one of two cars used by King George and Queen Mary, and the blue light has solved a problem that puzzled the police authorities for some time. When the King and Queen were returning from a function at night their car was often held up in the traffic. So the blue light was fixed to two of the automobiles. Whenever one appears, no matter what time of the night, it is given right of way, other traffic being held up.

Manitoba Doctors Will Assist

Dr. A. Stewart and Dr. S. S. of the department of agriculture, have left for Charlottetown, Prince Edward Island, where they will spend several months assisting with the testing of the 120,000 cattle on Prince Edward Island, where a restricted area is being set apart for the eradication of bovine tuberculosis.

World's Largest Dam

More than 750,000 pounds of dynamite have been used in building the world's largest rock-filled dam near Burlington. More than 4,000,000 tons of rock were blasted away.

Indians Did Not See King

Three B.C. Chiefs Wanted to Enter Protest Regarding Landing

"Four figures in tragedy sailed about the Commander Aurora from Southampton says the London Evening Standard, describing the departure of the Indians, Basil David, John Chittick, William Pierish, of British Columbia, and Mrs. Julia Williams, interpreter.

Mrs. Williams said: "They told me that the King is on a holiday and cannot see us. The result is that we have simply thrown away a lot of money crossing the Atlantic to see him, but we are not deterred. We shall come again."

The three Indian chiefs went from British Columbia to protest to the King concerning the seizure of their lands and the trapping of game. They claimed certain rights had been taken away from them which were guaranteed to them by the British Government of many years ago.

Canada's Waterpower Industry

The latest statistics on the waterpower industry of Canada show a total installation of 5,570,000 horsepower, which places Canada next to the United States in the nations using hydro power. The installation of waterpower in the Dominion, based on estimated population of 9,257,000 is placed at 387 horsepower per 1,000.

Hit Hat

"You say you've worn this straw hat three years," said the latter. "Wonderful! It looks like new."

"Yes, three years I've worn it, the wisdom of economy has begun to reassert itself. Government officials and brain workers furnish the largest percentage of the depositors."

Six Hundred Varieties of Fish in the Rockies

Wapiti Bungalow Camps in the Rockies, a popular resort for fishermen. Inset—Cut-Throat Trout from Bow River near Wapiti Lake.

In the coastal and inland waters of Canada some six hundred species of fish inhabit themselves. By far the greater number are marine types, many frequent both salt and fresh water, others are entirely confined to the lakes and streams of the interior. On the Canadian Pacific coast no fewer than five kinds of salmon are to be found, these forming a natural resource of no mean value, indeed over-

Two Systems Of Government

British Plan Has Many Advantages Over United States

The British system of government has advantages over ours in such matters. When a prime minister gives a report from a commission of his appointments and decides that its recommendations should be carried into effect, he has the assured support of parliament for his policy and can count on its ratifying his proposals for his position as premier is held by reason of the fact that he has a majority to that body which, will do as he asks. A report to an American president by a commission he creates, however, leads no further than a suggestion by the executive to the legislative department that its purpose should be made law. Congress is not bound to heed such counsel. Often it does not—*Detroit Free Press.*

Germans Are Saving Again

Banks Show Increasing Deposits Since Mark Was Stabilized

Recent savings bank figures show that the Germans are beginning to save again and in the past year and a half the number of depositors has grown rapidly. During the inflation period no one in Germany thought of saving money.

It was a policy of either "spend it before it is worthless," or of "get-rich-quick." Gradually, however, with the stabilizing of the mark value, the wisdom of economy has begun to reassert itself. Government officials and brain workers furnish the largest percentage of the depositors.

It is useless to worry; but it is useless to tell a man that it is useless to worry.

Seaweed As A Cure

Contains Iodine Necessary to Prevent Goiter Says Doctor

"The lovely seaweed, 'cassid' by many a pretty girl bather, has come into its own at last, as a protector of the same girl's beauty against the dreaded disease, goiter."

This was the declaration by Dr. J. W. Turentine, of the United States department of agriculture, in a paper presented before the seventh meeting of the American Chemical Society, Los Angeles.

Half of the girls living in a belt extending from New York to the Rocky Mountains are afflicted with incipient goiter, Dr. Turentine said. "The growing child," Dr. Turentine added, "should be fed a daily portion of iodine. Goiter is caused by lack of iodine."

"Merely a seaweed diet," he recommended. "One thousandth of an ounce of dry algae, or seaweed, contains the necessary quantity of iodine. When processed and ground into a flour it can be mixed in every day cooking."

Since the Dawn of Time

A vast treasure of fossils, dinosaur eggs and man-made implements, hidden since the dawn of time, and which may throw new light on life in remote periods, has been dug up and collected from the lonely sands of the Mongolian desert by Roy Chapman Andrews, American paleontologist, and his party, according to a cablegram received in New York.

Staten doesn't object to a man's attending church on Sunday if he gets his services the other six days in the week.

It is hard to make some people believe that the world goes round, because they have never got their heads on.

Modes And Morals

Abbreviation in Dress in Contrast to Earlier Fashions

The relation of modes to morals is one of those questions involved in delicate controversy for which the world has no satisfactory answer.

In nothing, perhaps, are men and women so much the creatures of environment as in the fashion of their clothes. The fact is that it is not so much the amount of cloth as a person wears, but the manner of wearing them that defines modesty. The godly men of the Middle Ages found in the unseemly length of women's trains evidence of immodesty and bade them discard the earthly trumpery. The towering starched ruffs of the Elizabethan age were a mark for the anatomists of the pulpits and at a later day the crinolines were a sure sign of moral decay.

Just now the world is running to an abbreviation in dress in sharp contrast to the mode of our grandmothers. To the older generation this tendency may seem to mark a lack of modesty in the age, but to the children of the generation the style has been dictated by morals or lack of morals, propriety or impropriety. Future critics may smile at the lack of taste displayed by the fashion, but regarding the university of the fashion, will hesitate to condemn a whole people.

It is all a matter of point of view. Morality or modesty is not a matter of a yard of silk worn here or discarded there. Conduct is a better guide. It is not what the style has put on her wears it—*San Francisco Chronicle.*

What Good Citizenship Means

Showing Lively Practical Interest in Welfare of Others

There are two degrees of showing good citizenship, most of them obligatory. To be a citizen in good standing which has to observe recognized laws and customs and transgressions of which brings punishment. You must contribute in taxes to the upkeep of the community. You are required to keep your promises in a sanitary condition. In other words, you are required to behave yourself generally. To be a good citizen, however, implies more than mere observance of laws. It means service, self-sacrifice and sacrifice. Good citizenship requires the support of movements that are intended to raise the standard of morality of living and to provide proper and adequate means for the physical training and the entertainment of the boys and girls, the young men and young women of your community. To simply live a passive moral and regular life, you are only doing what you have to do. To do something for the good of others is being a good citizen—*Allyne Express.*

The Cost Of Politeness

Child Convinced It Is Not Conducive To Truth

It was not a formal luncheon, and the hostess's small daughter was allowed to sit at the table with the grown-ups. Throughout the meal her behavior was perfect. At last the child, seated next her, turned to her small neighbor, candy dish in hand. "Wouldn't you like another chocolate?" she asked.

"No, thank you," replied the child, with a sigh.

"Why not?" she asked. "I have a hunch this conversation, and a little high voice piped up: 'Do you know when I told the most lie?'"

The hostess looked apprehensive, and the girl asked indiscreetly: "When, dear?"

"When I'm being polite," declared the child with conviction—*New York Sun.*

Paper Mill For Winnipeg

The Backus-Seaman application for a pulpwood berth in the Northern Manitoba will be supported by the Federal Government, Hon. Charles Stewart, minister of the interior, stated following a conference in Winnipeg. Mr. Stewart stated that he intended, on his return to Ottawa, to issue a contract immediately. It is the intention of the Backus-Seaman company to establish a 250-ton paper mill in Greater Winnipeg.

National Interests

There are many evidences of an awakening sympathy between the peoples of the two extremes of the country, a sympathy that will grow into intimate and useful understanding when more Canadians fully appreciate the desirability of possessing first-hand information about their country—its present and its future—*Victoria Times.*

In old times people multiplied on the face of the earth. Now they used adding machines.

Kirkino school children on the Yukon River tumbled in on 27 broadcasting stations in a single afternoon.

able of giving excellent sport to the fisherman.

Sturgeon are to be found in many of the large rivers of Western Canada, the Nelson and the Big Saskatchewan, the latter several lake expansions, yielding annually over one hundred and fifty thousand pounds of this kind of fish. That they attain to enormous size and weight may be readily understood from one clause in the

Blueback Salmon from British Columbia

fishery regulations which states that no net having a mesh less than eleven inches shall be used in Sturgeon fishing. In addition to this, there is a

It is perhaps erroneous to refer to the whale as a "fish," yet whale fishing is a regular industry in Canada, the entire coast of Hudson's Bay being so far as whaling is concerned, under control of the Dominion Government.

For the information of ambitious "Whalers" who may be eager to land something "big" it might be said that a permit to catch whales is issued on application and on payment of the usual fee of fifty dollars.—*Dan McGowan.*

Salmon Trout from Lake Minnewanka Banff, in the Canadian Pacific Rockies.

WORLD HAPPENINGS

Cardiff, Wales, is advertising for 500 woolen houses and expects to get them from Scandinavia.

An expedition has left here to explore the eastern shores of the North Arctic Ocean, proceeding later to Cape Hope, Alaska.

Lieut.-Col. C. P. Meredith has taken over his duties as secretary of the League of Nations Society at London, succeeding H. G. Richardson, recently resigned.

The delegates of the Empire Press Union, enroute to the Imperial Press Conference to be held in Australia, were given a civic welcome at Auckland, N.Z.

Professor Henri Louis Bergson, France, has resigned as president of the committee of International Intellectual co-operation of the League of Nations, on account of ill-health.

The Soviet Government, dissatisfied with some of its foreign embassies and legations, is planning a sort of travelling clubs which will travel over the world and check up on the diplomats.

It has been announced that all the provinces of the Dominion would be represented in the livestock exhibits at the Royal Winter Fair in Toronto. It was also stated British Columbia would send an exhibit of fruit.

The British Columbia Legislature will assemble for its annual session on October 26. A fall session is preferred by a majority of members of the house to a spring sitting, since they had been postponed earlier in the year.

Senator Webster has been in England making arrangements for the shipment of supplies of Welsh coal to Canada. In case of a coal miners' strike in the United States, the Welsh business will profit very materially.

The probe conducted by chief inspector of prisons, A. L. McPherson, into the food served to prisoners in the jails and institutions of Ontario has revealed that there is no general objection to the menu and general description by the regulations.

Effects Great Saving

New Investment Saves Oil Company \$50,000,000 Gallons of Gasoline a Year

"Breathing losses" of gasoline, estimated at \$50,000,000 gallons a year, by the bureau of mines, are being rapidly cut down by "breathing bags" developed for gasoline tanks by the Standard Oil Company of Indiana, according to a statement made public by the American Chemical Society.

"Breathing losses" are the evaporation of gasoline in tanks due to the sun's heat. This must be allowed to escape from the tanks through a vent, otherwise the pressure would injure or destroy the tank.

The Standard Oil Company consists of a balloon which captures the escaping gas during the day and gives it back to the tank at night, so that the same gas is breathed in and out over again without loss. The process was worked out by Robert E. Wilson, H. W. Atwell, E. P. Brown and E. W. Chambliss, of the Standard Oil Company of Indiana.

King Presents Colors

To Welsh Guards

These Bear Record of War History of Regiment

New colors were recently presented to the Welsh Guards. For the ten years since the formation of the regiment the Welsh Guards have carried colors on which no name of a battle has been emblazoned, but at a picturesque service at Windsor Castle, the King presented them with new colors that are a record of their glorious war history. The King said: "Ten years ago, when your regiment was raised, I presented its first colors at Buckingham Palace. Shortly after that period the regiment was called upon to fight for its country, and for its noble deeds in the Great War are inscribed upon your colors."

Good Far Catch

The first batch of last winter's fur brought from the Far North by the steamer De-la-Borde, from Alaska, has arrived at Edmonton and is valued at approximately \$1,000,000. Good catches of furs were reported throughout the north.

Wooling machines, which can produce in a few hours the amount of wool on which that wool is actually taken place in six months of use, are employed for testing the quality of wools.

A questionnaire recently issued in England shows that religious books stand next to fiction in favor with the reading public.

Wants To Establish
Own Medical Register

Irish Free State Has Sounded Death
"Knell of Profession"

The death knell of the medical profession in the Irish Free State has been sounded, in the opinion of many doctors, by an announcement of the government to establish a separate and independent medical register and cut loose from the British General Medical Council, by which the medical faculty of Ireland hitherto has been controlled. The general result of the decision, which is to be made effective next February, will be that doctors qualifying in the Free State will be unable to practice in Great Britain or Northern Ireland, while physicians from these places will be barred from Southern Ireland.

The government's decision, however, must be ratified by the Irish Parliament, and medical men, it is stated, will seek to obtain majorities against the proposal both in the senate and in the house.

President Cosgrave had issued an explanatory statement, seeking to allay the fears of those opposing the bill. Admitting there may be temporary disadvantages from the arrangement, he says, the government does not expect any serious loss of business.

"It is incompatible with our constitutional status," he adds, "that an important profession have its centre of gravity and disciplinary headquarters in another country."

Reached Top Record

63,000 Auto Licenses Issued in Saskatchewan This Year

Up to Aug. 12, 63,000 private auto licenses had been issued in Saskatchewan, according to report of P. W. Kerr, provincial license inspector. This is an increase of approximately 4,000 over the record number issued in 1921. Truck licenses issued this year to date number 5,000. Kerr, who reported that heavy and motor bus licenses issued so far would total approximately 1,500 each.

Transferring of licenses from one car to another is another matter which is giving considerable trouble, he said. In changing cars, the owners must secure a transfer of license through the department. The mere transfer of the license plates from one car to another is not sufficient. Persons who do not see to the proper transfer of the license are actually driving the new car without a license. Mr. Kerr pointed out.

Many people are under a false impression as to the issue of false plates with the license. Mr. Kerr said that the car is not issued on after July 1, but any person purchasing a car after October 1 may secure a license at half-price, but must furnish an affidavit that the car had not been used in the province prior to that date.

Find Moscow Very Dull

Foreign Envoys Do Not Have Much Social Life

To relieve the tedium of life among the foreign diplomats and newspaper correspondents, the Moscow Government has decided to allow visiting free theatrical entertainments once a month. Early in June a distinguished gathering of ambassadors, ministers and Soviet ministers were the guests of the Soviet Government at a concert given at the State Opera House, which was featured by ballet dances, operatic pieces and vocal solos by Bolshevik Russia's best artists. Moscow has not seen so many fine line-up since the days of the Czar. The flags of all nations were seen, the French tricolor being especially conspicuous.

It was believed the arrival of Jean Hebert, the new French ambassador, would relieve the dullness that pervades the foreign missions, but the hopes of those who sought greater social activity and gaiety have disappeared. The French ambassador and his wife live modestly at the former house of the Nansen Relief Mission, and already have adopted the quiet, unassuming life of their hosts and colleagues in the diplomatic missions.

Had Learned To Be Brief

A member of the Scottish General Assembly who prides himself in including brevity to the young mind, is telling a new story against himself. His son, who has returned to finish his summer term at an English school, started, if not gratified, him by a wire as follows: "S. O. S., 2 S. I., 1 S. V. Y." The lad has now (rather distinguishedly) himself, in reply to an anxious letter from his father, the following: "I have 215, verse 6, last two lines, which the anxious parent found to convey, 'Sorrow vanquished, labor ended, Jordan passed'—Exchange."

A good reputation is sometimes useful as a parachute to the man who dies rapidly in the world.

There are more than 10,000,000 Hindus in the world.

Is Comparatively Young Man

Doctor Gye Who Made Discovery in Connection With Cancer Germ Only Forty

Dr. William E. Gye, whose researches and discoveries in connection with the cancer germ have recently won him a fourth birthday. Despite his comparative youth, Dr. Gye has already made several valuable contributions to medical science. Some years ago he made a noteworthy discovery in the study of the nervous system and a little later he came into notice by researches into the poisonous effects of various drugs.

Dr. Gye's work has been done in connection with the National Institute of Medical Research, with which he has been connected for several years. He is the son of an English lawyer, and he himself worked as a railway porter to earn money for his education at the University of Edinburgh. During the war he served with the British Medical Corps in France and Italy.

The Lure of the Undiscovered
Many of World's Secrets Are Yet To Be Discovered

Lincoln Ellsworth is deservedly known to many as the former Arctic explorer and the patron whose financial gifts made the Amundsen expedition possible. It is the latter role that may serve to justify other rich men. There are many of the world's secrets yet to be solved. The Arctic has been the theatre of ocean, and his work is in a way connected by the wealthy Americans who have contributed to William Beebe's expedition. Western and Central Asia, much of Africa and South America, and both polar caps provide fine hunting grounds for anyone who wants to find out what's what and has funds enough to permit him to do so.—Baltimore Sun.

G. Washington, Jr.

A hardware merchant advertised for a day. A red-haired, red-faced young man applied for the job.

"Do you like work?" asked the merchant.

"Yes, sir," said the lad. "You're the first 'boy' we've been here today and hasn't told a lie."

Is Entitled To Crow's Nest Tariff

Calgary Transportation Expert Says Rates Should Apply to Peace River

That the Peace River is entitled to the benefit of the Crow's Nest rates on grain and flour, without further action by the government, is the opinion of William James, local transportation expert, and chairman of the transportation committee of the Calgary board of trade.

This opinion puts the present situation in the north in a new light, as the general impression is abroad that reduction of rates to move the year's grain crop on the R.D. and D.C. would be a matter of negotiation between the government and the C.P.R.

"I'm absolutely positive that the Crow's Nest freight rates should apply to the Edmonton, Dunvegan and British Columbia line, as well as to any other in the west," declared Mr. James. "I know that the recommendations made by the provincial board of trade who recently met in Edmonton, to the Dominion railway commission, took it simply for granted that the R.D. and D.C. would benefit from the Crow rates just as the other prairie lines. It certainly would be unfair to suggest anything else."

Free Insulin

New Government Policy to Be Administered in Alberta

Free Insulin supplies will be provided by the Alberta department of health, where the patients are not able to obtain the necessary medicine. George Howley, minister of health, announces this as a new government policy to be administered through that department. The minister's attention to the matter was brought to a short time ago by the case of the James Herald, who reported a number of cases in need of treatment but unable to meet the cost. It has now been decided to provide insulin for all such cases making application, and supplies will be sent out from the health department in Edmonton. Free application will be received and dealt with on its merits and necessary investigation as to medical diagnosis and financial circumstances will be made before issuing the supplies. Alberta will in this way be adopting a similar course to that already taken by the province of Ontario.

Canada Interested In Radio

Saskatchewan Stands 86th on Ontario in Number of Licenses Issued

Canada spent \$5,417,730 on radio sets and parts in 1924. Public interest in radio broadcasting, and the consequent demand for apparatus, has created a new industry. A report issued by the Dominion bureau of statistics shows that production of radio sets and parts in Canada last year amounted to \$2,201,103.

Radio licenses were issued by the department of marine and fisheries during the 12 months ended March 1925, to 25,936 persons. Ontario led all provinces with a total of 14,847. Saskatchewan took 2,826, followed by 6,553, British Columbia 6,499, and Alberta 5,812.

Venice May Lose Isolation

Automobile Road Will Connect Island With Mainland

Loss of the isolation which the city of Venice, as an island, has enjoyed for centuries is threatened by the arrangement which has been completed for the construction of an automobile road connecting Venice with Padua.

Later, it is planned to join this road to the Padua-Milan road. The importance of this project arises from the fact that hitherto the city of Venice has never been joined by road to the rest of Italy, the only communication being by boat or by train, crossing by means of a pontoon bridge.

Will Make Another Trial

Amundsen Plans New Polar Expedition For Next Summer

The Affen Posten, Oslo, Norway, states Captain Amundsen, since his arrival home from his recent expedition to the North Pole, has been preparing a new aeroplane expedition for next summer, from Spitzbergen over the North and Arctic regions to Alaska. The new paper states financial backing has been assured and the expedition will include Lincoln Ellsworth, who was with Amundsen's party this summer.

Made Productive By Irrigation

Situated in the centre of a district which has changed from a comparatively barren cattle ranging country to a fertile and productive one.

Irrigation, Kelowna was the scene of the nineteenth annual convention of the Western Canadian Irrigation Association. Delegates from British Columbia, Alberta and Saskatchewan, as well as representatives of the railway governments, etc., were in attendance.

In Mourning For Sir William Petersen

Ship Will Display Broad Ribbon Mark For Six Months

Montreal has, for the first time, been in mourning. The ship of the Peter- sen Line, as the steamed up the St. Lawrence, the now famous "corrupted ship" was conspicuous for a broad blue band painted all about the hull about four feet below the top deck. This ribbon mark formerly was white, and it will remain blue for six months as a mark of respect to the memory of the late Sir William Petersen, head of the line, who died suddenly in a heart attack some time ago while on a visit in connection with the proposed ship subsidy plan.

At the Hotel, which gave evidence before the ocean rate committee in the House of Commons in praise of the "corrupted" ship excepted in command. His ship, the Mecca, says a report by the slavery commission of the League of Nations published at Geneva.

Slavery Still Practiced

League of Nations Recommends Universal Abolition of System

Slavery is openly practiced in several Asiatic Mohammedan states, particularly in the Arabian peninsula, including the kingdom of the Hedjaz, where many slaves are girls who come from the Far East as pilgrims to Mecca, says a report by the slavery commission of the League of Nations published at Geneva.

The commission recommends universal abolition of the legal status of slavery, and would give every slave the right of freedom without payment of money. It suggests the establishment of a concentration point to which freed slaves may be sent pending their return to the country of their origin, and also recommends the extension of the right to the pursue slave dealers. The league commission suggests the prohibition of compulsory labor except for public works, for which there must be adequate pay.

Metals Can Be Made Thin

New Process Makes Them Transparent

As Glass Says Berlin Doctor. Dr. Karl Mueller, of the physical research bureau, Berlin, claims to have discovered a process whereby it is possible to reduce metal foil to a thickness of one-millionth of an inch, or a centimetre, while retaining its elasticity. The process, as explained by Dr. Mueller, is applied to a metal foil, including gold, rendering it transparent.

Has Remarkable Brain

American Now Visiting in London Gives Astonishing Exhibition

Str brains in one are said to be possessed by Mr. Harry Kahne, an American visiting in London. Simultaneously he will read a newspaper, write the headlines upon the board and backwards on a blackboard, at the same time spelling the words on the right way; speak continuously to his audience; answer questions giving the exact number of letters in each of the biggest towns of Great Britain, Canada and the United States; write backwards and upside down columns of figures which totaled 7,152,647, a figure previously agreed upon by the audience.

Each Day One Should Eat

Some fruit, either raw or cooked. Some bulky vegetable, such as lettuce, spinach, carrot or cabbage.

Some laxative food, such as prunes, apples, orange juice or a bran cereal. Some liquid and water one should drink, at least four glasses of water must be taken each day to flush the kidneys.

Buried For Seventeen Centuries

The body of Saint Christina the Virgin, buried seventeen centuries ago in the Catacombs of Rome, has been brought to New York. The body will be deposited in the Roman Catholic cathedral at Cleveland. It was presented to the pope by Joseph Schreiner, the pope in recognition of the generous offerings made through the kindness of one-millionth of an inch of the "House of Catecombs" built by the Pontifical Commission on Sacred Archaeology.

Mrs. W. Barnes, was admitted to the hospital last week.

Mrs. W. MacRae was admitted to the hospital on Sunday last.

Roy Bell, has taken his threatening outfit into the Lovers district.

J. Badger, of Connell's Corner, was admitted to the hospital on Thursday last.

The weather of the past few days has been damp and cold. Snow is reported to have fallen in Calgary, Wednesday.

Labour Day had no different aspect to any other day. Outside of the banks apparently everyone locally "carried on."

Rev. N. W. Whitmore, left on Monday by auto for Medicine Hat to attend the Synodical meeting of the Presbytery of the United Church for this district.

Willard Storey returned home on Tuesday.

Mr. McMillan, district road foreman of Medicine Hat, was in town Friday last.

Mrs. Mike Skappak, who was operated on for appendicitis on Tuesday morning, is progressing well.

H. H. Hall is under the weather, and Jim Adams is acting in the capacity of railway station agent in his stead.

A good rain on Saturday last held up threshing operations. Pasturage is now becoming good.

What is purported to be a very careful estimate places the average wheat yield for this district at 12 bushels to the acre. This figure was arrived at after a careful inspection and threshing returns to date in conjunction with acreage seeded.

Cream Cheques will Look Good Next Winter

Take good care of the cows during the next few busy weeks and they will return it to you in added income during the winter months.

Cream prices are exceptionally good. We need your cream. Ship us all you can and you will receive the highest market price and real service in the matter of tests, weights, clean cans and prompt returns. Our branch managers are out to give you real service.

Published in the interests of Empress and District.

Thursday, Sept. 10, 1925

The Ladies' Aid of the United Church, at Alton, are holding a Social Evening on Sept. 19.

Messrs. N. McAnuly and Owen Stewart left Wednesday morning for the north country where they intend to pursue farming operations.

Messrs. Carruthers, Robinson and P. Durian of Calgary, are spending their vacation in this vicinity.

H. Knight, deputised for E. McCaule in the local tonsorial parlor, Saturday.

F. A. Pears, officiated as local butcher, on Saturday, during the absence of R. L. Arthur.

Mrs. Geo. Schieb, left Tuesday morning for her home at Sand Point, Mont.

Mrs. R. M. Henderson and family, left this week for Anso, Sask., to join her husband there.

When school starts millions of ears and necks get washed clean.

Dr. and Mrs. A. L. Caldwell, of Empress, were visitors here on Friday last.—Budget, Lovers.

Mr. Lundal is relieving manager of the local yard of the Crown Lumber Co.—Mail, Basano.

Rev. Mr. Cooper, of Lovers, in company with Rev. Mr. Norton and the local Boy Scouts, went into camp for a few days, last week, west of town.

The local fire hall is undergoing a coat of paint, which it has been needing for some time and should make for considerable improvement in the appearance of the building.

Mary Hoy, had the misfortune to break her right wrist, when she was thrown from a buggy on Thursday last. She was discovered by the little daughter of Mr. and Mrs. Z. Livermore, lying unconscious alongside of the road.

The announcement of the Dominion elections can hardly be termed a surprise. Anything of this nature will have to be contained in the platforms of the parties, and these, we believe will be more seriously analysed by the voter than heretofore.

Prize Winning Canadian Peonies Exhibited in London

This unique picture shows the much discussed Canadian Peonies grown in Mont. by Mr. L. Ormiston Roy and shipped to England in cold storage in a Canadian Pacific vessel, on exhibition in the window of the Canadian Pacific offices in London, England. The Royal Horticultural Society has presented the Banksia Silver Medal to Mr. Roy and several London papers have remarked editorially upon the extraordinarily perfect condition of the blooms after their long sea voyage. An interesting feature of the picture is that in the window may be seen the reflection of the new Canadian Building which stands almost directly opposite the Canadian Pacific Offices and was recently opened by the King and Queen.

for storing, according to George Valentine, agronomy specialist at the South Dakota State College. This is very necessary in order that the new bins may be as clean as possible before the new crop is stored.

Thorough cleaning of the bin will add very materially in reducing disease in stored potatoes. Many diseases are ordinarily carried over in the bins, on the walls, floors and between the boards. An airing of the bins and exposure to the sunlight destroys fungi, moulds and bacteria that cause many potato diseases.

Thorough cleaning and exposure in sunlight is not enough however. In addition to a thorough cleaning several weeks before the new crop is to be stored, the bins should be disinfected a few days before the new crop is ready. The bins should be disinfected with the same solution with which seed potatoes are treated: Corrosive sublimate, 4 ounces to 30 gallons of water; or double strength formaldehyde, 1 pint commercial formalin to 15 barrels of water are the best materials for this purpose. Care should be taken that the disinfectant is thoroughly sprayed over the bins in order that all parts are covered and that all cracks in the walls and floors are reached.

She (anxious to impress): "I've just put my furs into cold storage!"

He: "Cold storage! Huh! very good—never heard it called that before; my euff-links and watch are there too!"

Lyn Lost, of Gull Lake, who is alleged to have caused the death of Marie Miller, of Lovers, by communicating infection, is now charged with manslaughter following the finding of the jury. He was allowed out on heavy bail.
